

Member 2 Deliverable

UI/UX Design, Bilingual Content, QA Plan, and Demo Safety Package

Project: Bedaya, a Jordan small-business launch platform that guides owners through onboarding, document preparation, signing, partner applications, and post-launch compliance.

Role	Primary responsibility	Final hackathon deliverables
Member 2 - UI/UX Designer & QA	Own the product experience across owner, partner, and admin journeys; make the Arabic and English interfaces consistent, usable, and demo-safe.	Full Figma prototype, bilingual UI strings, tested demo path, bug log, QA evidence, and backup demo video.

Executive Summary

Member 2 turns the team's feature list into a coherent product that judges can understand in one live story: Layla opens a home bakery in Jordan, signs in with the SANAD mock, completes onboarding, receives a roadmap, uploads documents, signs forms, applies to incubators and banks, then sees compliance reminders after launch.

The work should prioritize clarity over decoration: a trustworthy government-adjacent feel, fast scanning, strong Arabic right-to-left support, and a stable fallback prototype if the coded demo has issues.

Design Principles

Principle	How it should appear in the product
One answer, many uses	The wizard asks once; later screens show the same verified data reused in forms, applications, and bank files.
Trust before speed	Every automated action explains its source, verification state, and what the user can edit before submission.
Bilingual by design	Arabic RTL and English LTR use the same components, spacing rules, status colors, and information order.
Demo-safe depth	Live features are clickable end to end; prototype features use believable data and clear states.

Design System

Recommended visual direction: modern public-service fintech. Use the attached Bedaya Arabic logo as the brand anchor, with a calm green palette, restrained gold accents, and neutral surfaces for forms and dashboards.

Token	Value	Usage
Primary	#00543F	Top navigation, primary buttons, active roadmap steps, signed/approved states.
Secondary	#0A7457	Hover states, progress bars, selected cards.
Accent	#C49A4A	Highlights, SANAD badge outline, selected partner score.

Token	Value	Usage
Success	#15803D	Completed steps and accepted applications.
Warning	#B7791F	Missing documents, visits, expiring documents.
Error	#B42318	Rejected files, invalid fields, blocked steps.
Info	#2563EB	Guidance, appointments, AI assistant references.
Surface	#F7FAF8	Dashboard background and empty-state panels.
Type	Cairo or IBM Plex Sans Arabic	Arabic-first font with strong English fallback.

Core components: buttons, inputs, select menus, upload cards, status badges, progress bar, roadmap step card, document warning row, partner match card, chat message bubble, calendar event, data table, modal, toast, and empty state.

Screen Inventory

Area	Screens to design	Feature links
Owner entry	Landing, SANAD mock login, language switch, consent screen.	7
Onboarding	Business type, activity, city, location, partners, capital, documents needed, review answers.	1, 13
Roadmap	Dashboard, step detail, locked step, cost/time estimator, next action panel.	2, 10
Documents	Vault, upload, OCR preview, missing/expired/blurry warning, generated PDF preview.	3, 9
Signing	Document list, sign-all flow, success state, signed badge history.	4
Partners	Incubator matches, multi-apply, bank-ready file, send confirmation, application status.	5, 6
Helpers	AI assistant, notifications, appointments, business plan, compliance calendar.	8, 11, 12, 14, 17
Screens only	Location checker map, funding marketplace, expert marketplace, e-invoicing readiness.	18, 19, 20, 21
Partner/Admin	Partner inbox, application detail, request document, approve/reject, admin rules, fees, users, analytics.	15, 16, 22

Recommended Demo Path

Step	Screen	Judge-facing moment
1	Landing + SANAD mock	Show verified identity starts the journey without extra form-filling.
2	Wizard	Layla answers focused questions for a home bakery in Irbid.
3	Roadmap	Personal steps appear with progress, fees, expected days, and next action.
4	Document vault	Upload once; OCR preview fills forms; checker flags one fix.
5	Signing	Sign all generated documents in one place.
6	Incubators + bank file	Apply to matched partners and send a bank-ready file.
7	Assistant + calendar	Ask a licensing question and book the next visit.
8	Partner dashboard	A partner reviews the complete application and requests one missing item.
9	Admin/analytics	Show how rules, fees, partners, and bottlenecks are managed.

UX Acceptance Criteria

- Every owner screen must work in Arabic RTL and English LTR without clipped text or broken alignment.
- The primary action on each screen must be obvious within three seconds.
- All automated outputs must include a review or confirmation state before submission.
- Statuses must use consistent labels: Not started, In progress, Needs action, Submitted, Approved, Rejected.
- Live demo screens must include loading, empty, success, warning, and error states where relevant.
- No screen should depend on the presenter explaining invisible logic; the interface should show why a recommendation appears.

Bilingual UI Copy Starter

Use the exported UTF-8 strings file as the first shared copy handoff for Member 3. The PDF preview below lists the core keys and English copy; the companion file includes the Arabic interface copy for implementation.

Key	English
landing.title	Start your business in Jordan with one guided path.
landing.cta	Login with SANAD
wizard.progress	Step {current} of {total}
roadmap.next_action	Next action
roadmap.cost_time	Estimated cost and time
documents.upload	Upload document
documents.warning_blurry	This document is blurry. Please upload a clearer copy.
signing.sign_all	Sign all documents
partners.apply_selected	Apply to selected partners
assistant.placeholder	Ask about licenses, documents, or next steps
calendar.book	Book appointment
partner.request_doc	Request missing document

QA Plan

Test area	What to verify	Evidence
Laptop demo path	Full live story works without dead links, layout shifts, or untranslated labels.	Screen recording and checked bug list.
Android phone	Owner journey is usable at mobile width; upload, chat, and calendar controls remain tappable.	Screenshots of key screens.
iPhone	RTL alignment, buttons, and tables do not overflow; keyboard does not hide required actions.	Screenshots of key screens.
Bilingual switch	Language persists after refresh and all labels change direction correctly.	Before/after screenshots.
Error states	Missing upload, invalid input, failed partner send, and rejected document all show recovery guidance.	Bug list references.
Backup prototype	Clickable Figma path covers every live feature if the coded demo fails.	Prototype link and backup video.

Bug Log Template

ID	Severity	Screen	Steps to reproduce	Expected	Actual	Owner	Status
UX-001	High	Roadmap	Switch to Arabic after wizard submit	Cards mirror RTL cleanly	Example placeholder	M3	Open

48-Hour Execution Plan

Time	Member 2 focus	Handoff
Before Day 1	Logo lockup, design tokens, component set, initial screen map.	Share Figma library and strings draft.

Time	Member 2 focus	Handoff
Day 1 morning	Owner flow wireframes and clickable happy path.	Give Member 3 exact states and component names.
Day 1 evening	Partner/admin screens and prototype backup path.	Start bug list from first integrated demo.
Day 2 morning	Visual polish, RTL/LTR QA, mobile screenshots.	Retest fixes with Member 3.
Final hours	Record backup video, freeze copy, prepare judge-safe fallback.	Deliver prototype, video, strings, bug log.

Final Submission Checklist

- Figma file has named pages: 00 Cover, 01 Design System, 02 Owner Flow, 03 Partner, 04 Admin, 05 Prototype Backup.
- Prototype starts at the landing page and follows the Layla home-bakery story without presenter intervention.
- Arabic and English strings are exported and shared with Member 3.
- Bug log includes severity, reproduction steps, owner, status, and retest result.
- Backup video is recorded after feature freeze and stored where the presenter can open it instantly.
